## Summary

---

Looking for a software engineering role after graduating in May 2027, especially near database management, internal information systems, information technology (IT) teams, and extract, transform, load (ETL) pipelines. If that is your world, I would love to talk.

## Education

---

- |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                      |

## Skills

---

### Technical

- Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS, LaTeX
- Frameworks & Infra: React, Node.js, PostgreSQL, Git, GitHub Pages, APIs
- Data & Systems: database management, extract, transform, load (ETL) pipelines, internal information systems, information technology (IT) team collaboration
- AI / ML: full-stack AI systems, LLM, RAG, agentic AI, tool-calling, structured inputs and outputs
- Practices: WCAG 2.1 accessibility, technical documentation, privacy research, NDA-aware analysis, GTM, Figma, Canvas LMS
- Spoken languages: English (native), Fuzhounese (native), Spanish (intermediate)
